PROFESSIONAL SUMMARY

Computer Science graduate and technical support professional who builds practical AI-assisted software, automation, and local/cloud-connected integrations. Hands-on experience with Python, JavaScript, FastAPI, REST APIs, multi-agent workflows, local LLM deployment, testing, and operational debugging. Brings production support discipline to software work through reproducible diagnostics, clear documentation, secure integration boundaries, and user-focused communication.

TECHNICAL SKILLS

Languages & APIs: Python, JavaScript, PowerShell, Bash, SQL, FastAPI, REST APIs, Pydantic, JSON, Server-Sent Events

AI & Automation: OpenClaw, Gemini API, OpenAI API, Anthropic API, Ollama, llama.cpp, ComfyUI, prompt engineering, agent workflows

Systems & Tools: Windows, Linux/WSL, Git, Tailscale, TCP/IP, Wireshark, Nmap, Vite, CesiumJS

Engineering Practices: API integration, troubleshooting, regression testing, structured issue documentation, resource monitoring

SELECTED PROJECTS

Hybrid Agentic AI Workbench

Feb 2026 – Present

- Configured and operate 13 task-specific agents across separate workspaces for software assistance, email workflows, image generation, career tracking, weather monitoring, and home automation.
- Created agent tools and workflows for ComfyUI image generation, scheduled weather alerts, Philips Hue control, and a Python/pandas application tracker with more than 50 records.
- Diagnosed provider rate limits, context growth, stale endpoint instructions, payload mismatches, service-health failures, and Windows/WSL integration issues.

Windows/WSL Local AI and File-Transfer Bridge

Feb 2026 – Present

- Built a Windows-native FastAPI service for local chat, ComfyUI image generation, authenticated file transfer, system metrics, and service control from WSL-based agents.
- Integrated asynchronous Telegram polling, Ollama model lifecycle controls, generated-file responses, and CPU, RAM, and GPU VRAM reporting.
- Designed a privacy boundary that permits generation requests without exposing private Telegram chat history to the broader agent environment.

Multi-Provider LLM Evaluation Workbench

May 2023; rebuilt Feb 2026

- Built a web application that compares anonymized model responses and produces orchestrator-generated scorecards across OpenAI, Anthropic, Gemini, Ollama, and vLLM-compatible endpoints.
- Implemented concurrent Server-Sent Events streaming, provider-specific API handling, Ollama model discovery, masked configuration responses, and a browser interface.
- Repository: github.com/Zaptrix/llm-ensemble

Earth Driving Simulator

2025

- Developed a Vite and CesiumJS web application using Google Maps Photorealistic 3D Tiles; worked through tile streaming, camera behavior, geometry loading, and GPU constraints.

PROFESSIONAL EXPERIENCE

Call Center Analyst, Agilant Solutions – Lisle, IL

Feb 2024 – Dec 2025

- Diagnosed software, networking, Windows, macOS, and connected-device issues while managing approximately 15–20 tickets from roughly 30 calls per day.
- Produced reproducible escalation notes containing symptoms, attempted fixes, findings, and issue history for advanced support and engineering teams.
- Proposed workflow and knowledge-base improvements and assisted with onboarding two to three employees.

Help Desk Student Worker, College of DuPage – Glen Ellyn, IL

Sep 2021 – Dec 2022

- Provided student-facing support for email and password resets, computer-equipment use, minor hardware troubleshooting, documentation, and escalation.

EDUCATION & CERTIFICATION

Lewis University, College of Aviation, Science and Technology

Bachelor of Science in Computer Science

Coursework: Algorithms & Data Structures, Operating Systems, Databases, Cybersecurity

Certification: Microsoft Office Specialist (MOS)

2023

GPA: 3.42/4.0
